About Us

Crystalhills Group began operation in 2009 with major dealings in web development and software development. Since then we have developed and deployed POS applications, school management software (The school Clerk), Hospital management application and hotel management portals currently running in various organizations across the country.

Because we understand that the best marketing strategy is customer satisfaction, we offer full support for all our products with a 12 month warranty, a maintenance plan and replacement policies on damage.

Crystalhills is registered under the Corporate Affairs Commission (CAC).

Why you need a Biometric Device

Biometric devices measure and analyze unique physical or behavioral characteristics (fingerprint, voice pattern or facial recognition) as a means of verifying personal identity or granting access to a location.
At Crystalhills we recognize that Biometric Systems are the future of identification and access control so what we are offering is the future at affordable prices.
- Biometric devices save you time and money
- They ensure accountability and responsibility
- They eliminate risk of impersonation

Access Control Kit (CrystalKIT)

Our Crystal Kits contain everything needed to get a new access control system up and running. A wider range of options are available for you from the starter to a professional level. The kind of kit you use for the access control system of your door is dependent on the kind of door you are installing and also the standard and level of the network in which you are placing the access control device.

Software Development

Our software development department has continued to grow and remains a key aspect of our operations. Alongside our POS applications, school management software (The school Clerk), Hospital management application and hotel management portals, we now offer payroll software, canteen management systems and tailor made packages for customers according to their specific needs.

Fuel Monitoring Device

We are proud to present our patented Fuel Monitoring System, a fully functioning device that monitors liquid levels, location of and temperature in tanks. It works with fuel or water tanks, accurately measuring the content level in the tank and sending messages remotely about the status in the tank and in the case of mobile tanks, the location of the tank. Here are some comments from customers currently enjoying the Fuel Monitoring Device.
About his diesel tank at his office, Mr Shola Ibrahim had this to say: *It (the Fuel Monitoring Device) solved the problem of diesel theft at my office. It is like I can see into my tank even when I'm in another state*
Petrol Station owner **Tosin Joseph** said: *I can now monitor the amount of fuel in my underground tank and I get a text message from the device when my tank is low and this is saving me a lot of money..*
